A,Experimental source: PC-12 cell
C,Comment: This protein is a member of the epidermal growth factor family. It is functio
ating the differentiation of MDA-MB-453 cells.
C,Superiamily: human ExBB kinase activator alpha, brain and thymus; EGF homology; immunc
F,361-397/Domain: EGF homology < EGF>
                                                                                                                                                                                                            φ

Description molecule 2 - African clawed frog

N.Alternate names: N-CAM 2

C.Species: NacAM2

C.Species: NacAM2

C.Species: Asonogus laevis (African clawed frog)

C.Species: Asonogus laevis (African clawed frog)

C.Species: Asonogus laevis (African clawed frog)

C.Species: Takayama, E.; Tadakuman, 29.8 #text_change 21-Jul-2000

C.Accession: J50100

R.Kudo, M.; Takayaman, E.; Tadakuman, T.; Shiokawa, K.

Biochem. Biophys. Res. Commun. 245, 127-132, 1998

A.Title: Molecular cloning of sed-form neural cell adhesion molecules (N-CAMS) as the marginal common to TD000

A.Reference number: J508 Argus

A.Residues: 1-725 Argus

A.Residues: 1-721000

US-09-852-797-76 1521 1 MARRISRHRLLLLLLRYYVA......SSKATTMSENDFKHTKSFII 298 Title: Perfect score: Sequence:

BLOSUM62 Gapop 10.0 , Gapext 0.5 Scoring table:

141681 seqs, 52070155 residues Searched:

141681

Total number of hits satisfying chosen parameters: Minimum DB seq length: 0 Maximum DB seq length: 200000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

SwissProt\_42:\* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

FUNCTION: MAY PLAY A ROLE IN THE PROCESSES OF LYMPHOCYTE HOMING SECONDARY LYMPHOID ORGANS.
                            SUBCELLULAR LOCATION: Type I membrane protein (Potential). TISSUE SPECIFICITY: PROMINENTLY EXPRESSED ON HIGH ENDOTHELIAL VENULES BUT IS ALSO PRESENT ON THE ENDOTHELIA OF OTHER VESSELS. LOCALIZED TO THE INTERCELLULAR BOUNDARIES OF HIGH ENDOTHELIAL
                                                                                                                SIMILARITY: Belongs to the immunoglobulin superfamily.
SIMILARITY: Contains 1 immunoglobulin-1ike V-type domain.
SIMILARITY: Contains 1 immunoglobulin-1ike C2-type domain.
DATABARS: NAME-EROW; NOTE-PROW 2:1-3(2001);

Nomphilic adhesion via a novel dimerization motif.",

EMBO J. 20:4391-4398(2001).

C I- FONGTION: Seems to plays a role in epithelial tight junction formation. Appears early in primordial forms of cell junction formation. Appears early in primordial forms of cell junctions and recruits PARD3. The association of PARD3 with JAM1, thereby preventing tight junction assembly. Plays a role in regulating monocyte transmigration involved in integrity of epithelial barrier.

Involved in platelet activation.

C SUBMONIT: Inneracts with the first PDZ domain of PARD3. The association between PARD3 and PARD6B probably disrupts this

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    human and mouse cDNA sequences.",
Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-!- FUNCTION: SERVES AS A RECEPTOR FOR GROUP B COXSACKIEVIRUSES AND SUBGROUP C OF ADENOVIRUSES (AD2 AND ADS).
-!- SUBCELLULAR LOCATION: Type I membrane protein.
-!- SIMILARITY: Contains 2 immunoglobulin-like C2-type domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Andersson B., Tomko R., Andersson K., Darban H., Oncu D., Mizra M., Sollerbrant K., Sonnhammer E., Philipson L.; "Putative regulatory domains in the human and mouse CAR genes."; Submitted (MAR-2000) to the EMBL/GenBank/DDBJ databases.

-!- TISSUE SPECIFICITY: In embryos, both isoforms are initially expressed on the surface of the axons in the MPI pathway and later on several other longitudinal axon fascicles.
-!- SIMILARITY: Contains 5 immunoglobulin-like C2-type domains.
-!- SIMILARITY: Contains 2 fibronectin type III domains.
                                                                                                                                -!- FUNCTION: Neuronal recognition molecule for the MPI axon pathway, pathway recognition for axons during the development of nerve fascicles.
Beinert N., Dowe G., Schaefer U., Jaeckle H., Bucheton A., Callister D.M., Campbell L.A., Darlamitsou A., Henderson N.S., McMillan P.J., Salles C., Tait E.A., Valenti P., Saunders R.D.C., Glover D.M.;
                                                                                                                                                                                                                                             Event=Alternative splicing, Named isoforms=3;
Comment=Experimental confirmation may be lacking for some
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Flybase; FBgn000055; Fas2.

-!- SUBCELLULAR LOCATION: Type I membrane protein (long isoform) and attached to the membrane by a GPI-anchor (short isoform).
-!- ALTERNATIVE PRODUCTS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ISOId=035136-2; Sequence=VSP_002590;
-!-TISSUB SPECIFICITY: Expressed in subsets of both olfactory and vomeronasal neurons in a zone-specific manner.
-!- SIMILARITY: Contains 5 immunoglobulin-like C2-type domains.
-!- SIMILARITY: Contains 2 fibronectin type III domains.
                                                                                                                                                                                                                                                                                                           Eukaryota, Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation - the European Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).
FUNCTION: Direct ligand for ERBE3 and ERBE4 tyrosine kinase receptors. Concomitantly recruits ERBE1 and ERBE2 coreceptors, resulting in ligand-stimulated tyrosine phosphorylation and activation of the ERBE receptors. May also promote the heterodimerization with the EGF receptor. Subcellular Location is Exists As An Type I MEMBRANE PROTEIN AND AS A PROTECLYTICALLY RELEASED SOLUBLE GROWTH FACTOR FORM. THE MEMBRANE-BOUND FORM DOES NOT SEEM TO BE ACTIVE (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -!- PTM: Extensive glycosylation precedes the proteolytic cleavage (By

A "Characterization of a neuregulin-related gene, Don-1, that is highly expressed in restricted regions of the cerebellum and hippocampus.";

The copy of the core of the cerebellum and hippocampus.";

MOI. Cell. Biol. 17:4007-4014(1997).

The copy of the cerebellum and hippocampus.";

The copy of the cerebellum and ERBB tyrosine kinase receptors. Concomitantly recruits ERBB1 and ERBB2 coreceptors.

The copy of the cerebellum and activation of the ERBB receptors. May also promote the heterodimerization with the EGF receptor.

The copy of the copy of the cerebellum and activation of the ERBB receptors. May also promote the heterodimerization with the EGF receptor.

The copy of the copy of the ERBB receptors.

A PROTECUTATICALLY RELEASED SOLUBLE GROWTH FACTOR FORM. THE MEMBRANE-BOUND FORM DOES NOT SEEM TO BE ACTIVE (BY SIMILARITY).

The copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the 
    -i. DOWALN: The cytoplasmic domain may be involved in the regulation of trafficking and proteolytic processing. Regulation of the proteolytic processing involves initial intracellular domain dimerization (By similarity).

-i. DOWAIN: ERBB receptor binding is elicited entirely by the EGF-like domain (By similarity).

-i. PTM: Proteolytic cleavage close to the plasma membrane on the external face leads to the release of the soluble growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           form (By similarity). sequences useful as reagents in forensic analyses, as chromosome markers, as tissue/cell/organelle-specific markers, in producing expression vectors, or in screening and diagnostic assays. The invention is used as reagents in screening and diagnostic assays for abnormal novel expression and/or biological activity, and in screening compounds that may be used in the treatment of novel-related disorders, e.g. neurological disorders. The novel gene is also used in gene therapy. The present sequence is human novel splice variant of vascular endothelial junctional adhesion molecule (VEJAM), NoJAM of the invention

```

The present sequence represents a secreted protein. The polymucleotide and secreted protein are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating

New polynucleotides encoding secreted human proteins - derived from human foetal brain, adult brain, foetal kidney, placenta or adult pineal gland cDNA libraries.

Claim 17; Page 73-74; 113pp; English.

                                                                                                                                                                                                                                                                                                                                             The sequence represents a human junctional adhesion molecule 2 (JAM2). The polynucleotide encoding the polypeptide is useful for recombinant production of JAM-2 protein, which in turn is useful for the production of antibodies. The antibodies may be used for probing cellular localisation and/or expression of JAM2 in tissues under normal and disease states, for immunoprecipitating JAM2 protein from cells and/or stroke tissues to determine whether it is modified by glycosylation and phosphorylation, and for determining JAM2 function. The antibodies inhibit interaction of JAM2 with inflammatory cells or influences their paracellular migration, and is therefore useful for alleviating inflammatory diseases such as arthritis, asthma, rheumatoid arthritis, inflammatory bowel disease and Crohn's disease

The invention relates to human secreted or transmembrane protein (1), their fragments and is encoded by specific complementary deoxyribonucleic acid (DDNA) inserts (11), where the protein is substantially free from other mammalian proteins. (1) are useful for preventing, treating or ameliorating a medical condition, especially immunological treatment or prevention of tumours. (1) exhibits activity relating to angiogenesis, or cytokine, cell proliferation, cell proliferation, cell proliferation, cell proliferation, cell proliferation, cell proliferation, cell proliferation or inhibin-related cativities. (1) can be used to manipulate stem cells in culture to give rise to neurophithelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease, accidental damage or cells damaged by illness, autoimmune disease, accidental damage or cells damaged by illness, autoimmune disease, and reural cells and central and peripheral nervous system diseases and neuropathies, such as Alzheiner's, Parkinson's disease, Huntington's disease, amyotrophic cellateral sclerosis. (1) is involved in chemotactic or chemokinetic activity, regulation of haemacopolesis and is useful for treating myeloid or lymphoid cell disorders, plateled disorders such as thrombcoytopaenia and for regeneration of bone, cartilage, tendon, ligament and/or nerver issue growth and in tissue repair, healing of burns, incisative disorders or periodontal disease. (1) is also useful for gut protection or periodontal disease. (1) is also useful for gut protection or centomine disorders engair that of lung or liver fibrosis, reperfusion injury in various tissues, various immune deficiencies and disorders engantering or severe combined immunodeficiency (SCID), bacterial or fungal infections, succeeding graves as asthem or other respiratory problems. (1) is useful to express recombinant protein, as markers for tissues in which the ceromorphic sequence in that of a polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  82
                   Novel secreted or transmembrane protein and polynucleotide encoding the protein, useful for diagnosis and treatment of neurological disorders, cancer, autoimmune diseases, bone disorders and lung or liver fibrosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 YHKAYGFSAPKDQQVVTAVXYQEAILACKTPKKTVXSRLEWKKLGRSVSFVYYQQTLQGD

The invention comprises the DNA and protein sequences of the extracellular region of human junctional adhesion molecules (huJAM). The extracellular huJAM DNA and protein sequences are useful in the treatment of: immune system disorders (e.g. immune deficiency); autoimmune disorders, inflammatory disorders; cancer; wound healing; or a cardicovascular disease. The present amino acid sequence represents the full-length membrane-bound huJAMZ protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; sheep; pig; cow; fruit fly; yeast; hamster; macaque; horse; tomato; monkey; dog; sea urchin; expressed sequence tag; EST; diagnostics; forensic test; gene mapping; genetic disorder; biodiversity;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New extracellular human junctional adhesion molecule (huJAM) polypeptide, useful for treating an immune system disorder such as an immune deficiency or an inflammatory disorder, cancer, wound healing, or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 YHKAYGFSAPKDQQVVTAVXXQEAILACKTPKKTVXSRLEWKKLGRSVSFVYYQQTLQGD 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  comprises the sequence of any of the genes that are up-regulated or down-
regulated in specific cancers (e.g. about 1031 genes up-regulated or
acute lymphocytic lettemial.) ACC72641 to ACC72660 represent cancer
related gene nucleotide sequences which encode the proteins given in
ABR58521 to ABR58709. Also described: (1) determining the presence or
absence of a pathological cell in a patient; (2) an expression vector
comprising a nucleic acid molecule described above; (3) a host cell
comprising the vector; (4) an isolated polypeptide, which is encoded by
the nucleic acid; (5) an antibody that specifically binds the polypeptide
of (4); (6) specifically targeting a compound to a pathological cell in a
patient by administering to the patient the antibody above; and (7) a
drug screening assay. The nucleic acid is useful for a diagnostic markers or
therapeutic targets. In particular, the nucleic acid is useful for bladder, brain, breast, cervix, colon/rectum, kidney, lung, ovary,
andreas, prostate, skin and uterus), wounds, ischaemia, heart diseases,
therosclerosis and endometriosis. The nucleic acid is also useful in
a pathologies oreening, particularly for identifying agents for treating these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human, gene therapy, extracellular region; junctional adhesion molecules; huJAM; immune system disorder; immune deficiency; autoimmune disorder; inflammatory disorder; cancer; wound healing; cardiovascular disease; full-length membrane-bound huJAM protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          82
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         present invention describes an isolated nucleic acid molecule, which
                                                                                                                                                                                                                                                                                                                                                         New genes that are up-regulated or down-regulated in cancers, useful as markers for diagnosing e.g. cancer, ischemia or heart diseases, or as therapeutic targets for screening drugs for treating these diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             23 YHKAYGFSAPKDQQVVTAVEYQEAILACKTPKKTVSSRLEWKKLGRSVSFVYYQQTLQGD

The specification describes A33 related antigens PRO301, PRO362 and PRO2045. The methods and compositions of the invention are useful for the treatment and diagnosis of inflammatory disease and tumours in mammals. Conforming the include of inflammatory bowel disease, statutions of include of inflammatory bowel disease, systemic solerosis, polymorale chronic arthritis, spondyloarthropathies, spetemic sclerosis, polymyositis, idiopathic inflammatory myopathies, spetemic sclerosis, polymyositis, statution pancytopenia, and are arcticated in autoimmune hemolytic autoimmune pancytopenia, idiopathic thrombocytopenia paroxymal nocturnal hemoglobinuria, anemia, immune pancytopenia, idiopathic thrombocytopenia paroxymal nocturnal hemoglobinuria, and autoimmune thrombocytopenia, idiopathic thrombocytopenia immune-mediated renal disease, Hashimoto's throiditis, juvenile lymphocytic thrombocytopenic throiditis, arrophic throiditis, diabetes mediated trombocytopenia, thrombocytic thrombocytopenia, thrombocytopenia, thrombocytopenia, thrombocytopenia, thrombocytopenia, thrombocytopenia, demyelinating disease, Hashimoto's diabetes mellitus, immune-mediated renal disease, alomeralian of the central and peripheral nervous systems such as multiple sclerosis, idiopathic primary cripheral nervous systems such as multiple sclerosing cholangitis, inflammatory and fibrotic lung diseases, infectious hepatitis, primary confliants, diseases, disconsensitive enteropathy, hillary cirrhosis, granulomatous hepatitis, sclerosing cholangitis, inflammatory and fibrotic lung diseases, gluten-sensitive enteropathy, diseases of the lung such as ecsinophilic pneumonias, idopathic massociated diseases disease. The present sequence represents PRO245
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Inflammatory cell infiltration; immune response; T cell proliferation; anti-inflammatory; anti-autoimmune; anti-diabetic; spondyloarthropathy; T cell-mediated disease; spondyloarthropathy; real-disease; inflammatory myopathy; hemolytic anemia; thrombocytopenia; thyroiditis; diabetes mellitus; demyelinating polymeuropathy; Guillain-Barre syndrome; multiple sclerosis; polymeuropathy; hepatitis; cirrhosis; enteropathy; sclerosing cholangitis; inflammatory bowel disease; Mihpple's disease; skin disease; dermatitis; psoriasis; asthma; allergic rhinitis; tumor; food hypersensitivity; urticaria; eosinophilic pneumonia; transplant; idiopathic pulmonary fibrosis; graft rejection; PRO245; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    23 YHKAYGFSAPKDQQVVTAVEYQEAILACKTPKKTVSSRLEWKKLGRSV9FVYYQQTLQGD 82

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         YHKAYGFSAPKDQQVVTAVXYQEAILACKTPKKTVXSRLEWKKLGRSVSFVYYQQTLQGD 60
